TAPPED SINGLE COIL PICKUP - MODEL 3S

The 3S output level at the white wire is twice that of the stock Strat* pickup. At this power level the 3S has a smooth, full range response with more midrange emphasis.

The 3S power level at the red wire is equal to that of the stock Strat* pickup with very similar upper midrange and treble response.

Either power level can be selected with an SPDT switch or a push-pull potentiometer switch.

Bartolini pickups are designed and manufactured by:

BARTOLINI GUITARS - P.O. BOX 934 - LIVERMORE, CA 94550 - U.S.A.

U.S. Patent Nos. 39837777 & 39837778
